omribor@gmail.com   Omri Bornstein   applegamer22.github.io

Education

1. **2017 — 2019**: secondary education at Australian Science & Mathematics School (ASMS), Adelaide, South Australia

2. **2020 — Present**: Bachelor of Computer Science at Monash University, Melbourne, Victoria

Skills

- **Computer Programming Languages**: Go, TypeScript/JavaScript, Python, Kotlin/Java, C/C++

- **Document Markup Languages**: HTML/CSS, TeX/LaTeX, Markdown

- **Tools**: Git, GitHub/GitLab, Docker, Kubernetes, CI/CD

- **Platforms**: Linux, Cloud Native, web servers/browsers, macOS, Windows

- **Soft Skills**: technical writing, presenting/public speaking, research, troubleshooting, explaining, collaboration/teamwork

Leadership Experience

1. **May 2021 — January 2022**: General Representative at Monash University's Cyber Security Club (MonSec)

2. **January 2022 — June 2022**: Secretary at Monash University's Cyber Security Club (MonSec)

3. **June 2022 — Present**: Vice President at Monash University's Cyber Security Club (MonSec)

Projects

Open-Source

- `cocainate` is a cross-platform re-implementation of the macOS utility `caffeinate` that keeps the screen turned on either until stopped, for a set duration of time or while another process still runs.

- `stalk` is a cross-platform file-watcher that can run a command after each file-system operation on a given files or simply wait once until a file is changed.

- `raker` is a social media scraper that is interfaced via a server-side rendered HTML user interface (or a CLI), and is managed by a REST API and a NoSQL database.

- scr-web (and its scr-cli counterpart) is my previous attempt at building a full-stack social media scraper with Angular on the front-end, and Nest on the back-end.

- sp is my first attempt at building a Minecraft server plugin. This plugin adds the requirement that the player supplies the password (via a server command) before proper server interaction is allowed, and as long as the password isn't provided, the currently-unauthorized player is blinded and immobile.

- ctftime-discord-bot is a discord bot I made for the MonSec Discord server, that fetches statistics about competing teams from CTFtime, and displays them in the Discord interface.

Research

- As part of the FIT2082 unit, I contributed to an existing codebase, based on prior research by (Gange, Harabor and Stuckey, 2021) about *Lazy CBS*, their Multi-Agent Path Finding (MAPF) algorithm.
  - My task was to modify the *Lazy CBS* codebase such that the algorithm also outputs the final set of constraints that is used to rule out paths, such that *Lazy CBS* is formally an Explainable Multi-Agent Path Finding (XMAPF) algorithm.
  - I learned how to enable *Python-to-C++* bindings, such that the compiled *Lazy CBS* codebase can be used as a Python-facing library for future projects.

Freelancing

- I implemented a fault-tolerant file back-up system that enables the continuation of file transferring from an variably-approximate point in time before the back-up disruption.
